TALKBACK SYSTEM With FIRE ALARM

Talkback and fire alarm system is a microcontroller based system security system . The typical setup includes a microphone inbuilt master and slaves. Slaves are placed in the floors, and a two way communication is possible by TALK and LISTEN modes.

Using this setup, the user can communicate and able to understand the status of each floors. It is a multi zone broadcasting system. It also helps in controlling the activities from a single place. It can be handle infinity zones which could be later the best choice for schools, hotels, guest

Talkback and fire alarm system will provide the centralized system to your Home / Hotel / Restaurant/ Park/ shopping malls, where you need fire protection to different zones/ rooms in all. It will provide BIG storage space where user can store all of audio collection, at the same time it can take different source inputs through which user can connect independently. Even user can give MIC input which can be used as source of announcements in the whole building.

Features :
- Advance Hi-Speed micro controller based Simplex type talk back unit.
- Best use in multi-stories building.
- 16 X 2 character LCD Display.
- Compatible with any fire and Expandable zone fire alarm panel.
- Compatible with any make smoke & Heat sensor.
- TALK and LISTEN modes to both master and slaves.
